Telemedicine Physician Service at Your Pharmacy

The eventual goal of our telemedicine services is to bring more long-term customers to the serviced pharmacies.

In-Pharmacy telemedicine services

Our virtual care clinics connect patients through your pharmacies. We aim to benefit the pharmacy and create long-term relationships between the pharmacy and patients using telemedicine.

No nurses required

Save the budget on other needs. Pharmacists and staffers can work with the patient in accessing useful physician care, hence pharmacies get to show patients their service and convert them to become their regular patients.

More useful medical service

Many conditions cannot be managed when patients connect to telemedicine providers directly on their own. Our approach to team up with pharmacies provides easy access to patients; and with proper staff training, useful point of care testings and powerful diagnostic tools, patients can get the necessary and effective care.

Capture that prescription

Our workflow by connecting pharmacies with patients for telemedicine service, ensures pharmacies are being profiled and minimizes the chance of prescription leakage.

Telemedicine Medical Services at Your Pharmacy

Retain your patients

Most telemedicine providers service multiple chains and pharmacies. Patients that access telemedicine directly can shop around for both physician and pharmacy services. Having a telemedicine service directly on-site at your pharmacy or referred by your team, will ensure patients will continue to receive service from your pharmacy.

Comprehensive medical services

We are the only provider in the market that has the breadth and depth of physician and clinic services. You can utilize ECMS to set up in-person physician service when ready.

Gotodoctor.ca (Teledact Inc.) is a leading telemedicine technology provider that operates in health facilities, senior living centres, and pharmacies across Canada. Its virtual physician clinics in pharmacies enhance the patient experience by creating an integrated care model, which helps improve patient outcomes. Gotodoctor.ca is also a listed virtual care provider on all McKesson Retail Banner Group and Rexall consumer-facing portals.

Enhanced Care Clinic (ECC) has been providing physician and medical clinic services since 2010. With a team of 100 physicians and staff, ECC services over 100,000 patient visits each year. Enhanced Care Medical Services (ECMS), a subsidiary of ECC, is set up specifically to help independent pharmacy owners to develop physician and medical clinic services and grow their business. ECMS has been the Preferred Provider of Physician and Medical Clinic services for McKesson Retail Banner Group pharmacies, since 2017.

Medical care first, technology to enhance

Many telemedicine providers utilize freelance physicians. Enhanced Care has its own physician team and has been operating physical medical clinics and telemedicine for over 10 years. We believe in team based care and leverage technology to deliver better health outcomes to patients.

Servicing all your patients

Seniors and those with complex conditions will require assistance to access telemedicine service. Our integration with your pharmacy allows you to focus on these target patient groups. Patients have the choice to access telemedicine using videoconference or simply over the phone to fit their needs.
